Lesson: Soda Straw Rockets

Grades: K-8  Prep Time: ~45 Minutes  Lesson Time: ~90 Minutes

WHAT STUDENTS DO: Test a rocket model and predict its motion.

Curiosity about what lies beyond our home planet led to the first rocket launches from Earth and to many exploration missions since. Using simple materials (soda straws and paper), students will experience the processes involved in engineering a rocket. Conducting engineering tests, students will have the opportunity to answer a research question by collecting and analyzing data related to finding out the best nose cone length and predicting the motion of their model rockets. In this collection, this lesson builds on the concept of using models encountered in Lessons 1-3, and introduces the concepts of prediction and hypothesis.

NRC CORE & COMPONENT QUESTIONS | INSTRUCTIONAL GOAL

HOW DO ENGINEERS SOLVE PROBLEMS?
NRC Core Question: ETS1: Engineering Design

What Is a Design for? What are the criteria and constraints of a successful solution?
NRC ETS1.A: Defining & Delimiting an Engineering Problem

Students will be able

IO1: to generate explanations based on evidence from tests of model

HOW CAN ONE EXPLAIN AND PREDICT INTERACTIONS BETWEEN OBJECTS AND WITHIN SYSTEMS OF OBJECTS?
NRC Core Question: PS2: Motion and Stability

How can one predict an object’s continued motion, changes in motion, or stability?
NRC Component Question: PS2.A: Forces and Motion

On behalf of NASA’s Mars Exploration Program, this lesson was prepared by Arizona State University’s Mars Education Program, under contract to NASA’s Jet Propulsion Laboratory, a division of the California Institute of Technology. These materials may be distributed freely for non-commercial purposes. Copyright 2012; 2010; 2000.
1.0 About This Activity

This activity is part of the Imagine Mars Project, co-sponsored by NASA and the National Endowment for the Arts (NEA). The Imagine Mars Project is a hands-on, STEM-based project that asks students to work with NASA scientists and engineers to imagine and to design a community on Mars using science and technology, then express their ideas through the arts and humanities, integrating 21st Century skills. The Imagine Mars Project enables students to explore their own community and decide which arts-related, scientific, technological, and cultural elements will be important on Mars. Then, they develop their concepts relating to a future Mars community from an interdisciplinary perspective of the arts, sciences, and technology.

The Imagine Mars lessons leverage A Taxonomy for Learning, Teaching, and Assessing by Anderson and Krathwohl (2001) (see Section 4 and Teacher Guide) at the end of this document. This taxonomy provides a framework to help organize and align learning objectives, activities, and assessments. The taxonomy has two dimensions. The first dimension, cognitive process, provides categories for classifying lesson objectives along a continuum, at increasingly higher levels of thinking; these verbs allow educators to align their instructional objectives and assessments of learning outcomes to an appropriate level in the framework in order to build and support student cognitive processes. The second dimension, knowledge, allows educators to place objectives along a scale from concrete to abstract. By employing Anderson and Krathwohl’s (2001) taxonomy, educators can better understand the construction of instructional objectives and learning outcomes in terms of the types of student knowledge and cognitive processes they intend to support. All activities provide a mapping to this taxonomy in the Teacher Guide (at the end of this lesson), which carries additional educator resources. Combined with the aforementioned taxonomy, the lesson design also draws upon Miller, Linn, and Gronlund’s (2009) methods for (a) constructing a general, overarching, instructional objective with specific, supporting, and measurable learning outcomes that help assure the instructional objective is met, and (b) appropriately assessing student performance in the intended learning-outcome areas through rubrics and other measures. Construction of rubrics also draws upon Lanz’s (2004) guidance, designed to measure science achievement.

How Students Learn: Science in the Classroom (Donovan & Bransford, 2005) advocates the use of a research-based instructional model for improving students’ grasp of central science concepts. Based on conceptual-change theory in science education, the 5E Instructional Model (BSCS, 2006) includes five steps for teaching and learning: Engage, Explore, Explain, Elaborate, and Evaluate. The Engage stage is used like a traditional warm-up to pique student curiosity, interest, and other motivation-related behaviors and to assess students’ prior knowledge. The Explore step allows students to deepen their understanding and challenges existing preconceptions and misconceptions, offering alternative explanations that help them form new schemata. In Explain, students communicate what they have learned, illustrating initial conceptual change. The Elaborate phase gives students the opportunity to apply their newfound knowledge to novel situations and supports the reinforcement of new schemata or its transfer. Finally, the Evaluate stage serves as a time for students’ own formative assessment, as well as for educators’ diagnosis of areas of confusion and differentiation of further instruction. This five-part sequence is the organizing tool for the Imagine Mars instructional series. The 5E stages can be cyclical and iterative.
2.0 Materials

Required Materials

Please supply:

- 30 Sharpened Pencils (1 per person)
- 15 Scotch Tape Rolls – 1/4” tape if possible (2 per group)
- 30 Individually Wrapped Drinking Straws (1 per person)
- 15 Meter Sticks or Tape Measures (2 per group)
- LCD projector and computer with internet access to find pictures or video of rockets on the following site: http://www.nasa.gov/centers/kennedy/launchingrockets/archives/elv_archive-index.html.

Materials Provided

Please Print:

From Student Guide:
(A) Soda Straw Rocket Template – 1 per student
(B) Soda Straw Rocket Data Log – 1 per pair of students
(C) Soda Straw Rocket Data Analysis Graph – 1 per pair of students
(D) Soda Straw Rocket Analysis – 1 per student

Optional Materials

From Teacher Guide:
(E) “Soda Straw Rocket” Assessment Rubrics
(F) Alignment of Instructional Objective(s) and Learning Outcome(s) with Knowledge and Cognitive Process Types

3.0 Vocabulary

Analyze consider data and results to look for patterns and to compare possible solutions

Data facts, statistics, or information

Empirical Evidence knowledge gained through direct or indirect observation

Engineering a field in which humans solve problems that arise from a human need or desire by relying on their knowledge of science, technology, engineering design, and mathematics (derived from NRC Framework, 2012).

Explanations logical descriptions applying scientific information
Instructional objectives, standards, and learning outcomes are aligned with the National Research Council’s *A Framework for K-12 Science Education: Practices, Crosscutting Concepts, and Core Ideas*, which serves as a basis for upcoming “Next-generation Science Standards.” Current National Science Education Standards (NSES) and other relevant standards are listed for now, but will be updated when the new standards are available.

The following chart provides details on alignment among the core and component NRC questions, instructional objectives, learning outcomes, and educational standards.

- Your **instructional objectives (IO)** for this lesson align with the NRC Framework and education standards.

- You will know that you have achieved these instructional objectives if students demonstrate the related **learning outcomes (LO)**.

- You will know the level to which your students have achieved the learning outcomes by using the suggested **rubrics** (see Teacher Guide at the end of this lesson).

**Quick View of Standards Alignment:**

The Teacher Guide at the end of this lesson provides full details of standards alignment, rubrics, and the way in which instructional objectives, learning outcomes, 5E activity procedures, and assessments were derived through, and align with, Anderson and Krathwohl’s (2001) taxonomy of knowledge and cognitive process types. For convenience, a quick view follows:

---

**Graph**

A diagram representing the relationship between facts or statistics

**Hypothesis**

A suggested explanation that predicts a particular outcome based on a model or theory, to be shown true or false

**Inquiry**

A method of learning scientists use, which includes observing, questioning, examining what’s already known, planning investigations, using tools to gather, analyze, and interpret data, proposing hypotheses and predicting results, and communicating findings (derived from NSES, 1996)

**Mission**

An operation designed to carry out the goals of the space program

**Models**

A simulation helps explain natural and man-made systems and shows possible flaws

**Prediction**

The use of knowledge to identify and explain observations or changes in advance (NSES, 1996)

**Questions**

Scientists ask questions that can be answered using empirical evidence

**Rocketry**

A branch of science that deals with rockets and rocket propulsion

This activity also aligns with:

**NSES (B): PHYSICAL SCIENCE**

Grades 5-8: (B) Properties of Objects & Materials Position & Motion of Objects

**NRC SCIENCE & ENGINEERING PRACTICES**

1) Developing and using models
2) Planning and carrying out investigations
3) Analyzing & interpreting data
4) Using mathematical and computational thinking
5) Constructing explanations and designing solutions

**NRC SCIENCE & ENGINEERING CROSSCUTTING CONCEPTS**

1) Cause and effect
2) Systems and system models
NATIONAL COUNCIL OF TEACHERS OF MATHEMATICS (NCTM)

- Algebra
- Measurement
- Data Analysis and Probability

21ST CENTURY SKILLS

- Creativity and Innovation
- Critical Thinking and Problem Solving
- Communication
- Collaboration
- Flexibility and Adaptability
- Initiative and Self-Direction
- Productivity and Accountability

5.0 Procedure

PREPARATION (~15 minutes)

- Set up authorized target for rockets (globe, ball, a round circle on an easel).
  - Access pictures of rockets on the internet:
    http://www.nasa.gov/centers/kennedy/launchingrockets/archives/elv_archive-index.html

- Print:
  - Student Sheets (A-D) – 1 per student

🍎 Teacher Tips

1. If possible, use ¼” tape for taping the rockets. The smaller size works more easily and can be applied without over-taping areas.
2. Do not distribute the straws until all the students are finished with their rocket and you are ready to have the class begin the launches. Use wrapped straws for sanitary purposes.
3. Have the students line up in a horizontal line to launch the rockets. Depending on the number of students, you may have to have sequential launches take place. An outside venue, cafeteria or gym would work great, as you could spread the students out and allow them to make their measurements easily. Make sure you let them know that no unauthorized launches can be done! They must launch when given permission.
4. Having a launch countdown as a group is always fun! (e.g., 10,9,8,7…)
5. Always provide an authorized target (globe, ball, etc. for students to direct their aim).
6. If students take their rockets home, please advise that no rockets may be launched on the bus!
7. If you use Soda Straw Rockets for other venues (school space nights, open house, etc.), make sure you have a target for the students. Provide a small ziplock bag in which students can place their rockets and ask them not to launch in other places.
8. To save time, it is very helpful if you have extra rocket pieces already cut for students who struggle with cutting.

**STEP 1: ENGAGE (~20 minutes)**

**Research common rocket features**

A. **Blast off!** Getting off Earth and toward a solar system destination is exciting. How do we know we can get where we want to go? Engineering design is important to helping us reach our goals. For this engagement, you will be modeling steps in the inquiry process for your students, from observation and questioning to testing and acquiring results, as well as engineering design. As students get older, they will be able to complete these steps on their own.

B. **Show images of rockets.** For initial engagement, you can also begin with “Mars in a Minute: How do we launch to Mars?” as a cartoon teaser for more in-depth content. Research video and images of rockets that NASA sends into space. ([http://www.nasa.gov/centers/kennedy/launchingrockets/archives/elv_archive-index.html](http://www.nasa.gov/centers/kennedy/launchingrockets/archives/elv_archive-index.html)). Ask students what they may notice about the rockets and the launches. Do they have something in common?

C. **Guide the students to look directly at the nose cone of the rocket.** Are there any differences? What would happen if a different cone were used? Maybe if it was shorter, longer, or didn’t have one?

D. **What do the students predict would happen to the distance a rocket will travel if changes were made to the cone?**

E. **Let’s investigate that question!** Have students fill out their hypothesis on *(D) Soda Straw Rocket Analysis (Question 1).*

**Curiosity Connection Tip:** For making a connection to NASA’s Mars Rover “Curiosity,” please show your students additional video and slideshow resources at: [http://mars.jpl.nasa.gov/participate/marsforeducators/soi/](http://mars.jpl.nasa.gov/participate/marsforeducators/soi/)

**STEP 2: EXPLORE (~30 minutes)**

**Design and implement rocket investigation**

A. **Give students the (A) Soda-Straw Templates and direct them to write their names on the fins of the rockets.** Review the directions on how to construct their rocket.

**Teacher Tip:** Have students work in pairs to construct the rocket tubes. One student can hold the tube tight on the pencil and the other student can apply the tape to the paper tube. Students build the rocket on the pencil. Tell them not to remove it from the pencil until you are ready to distribute the straws.

B. **Students can be organized into groups of 4 so that each of the students within the group can build a rocket with a different length of nose cone.**
C. Students should select a control for this investigation. Discuss that the purpose of a control is to have something to which you can compare the results. This control should be similar to what you are testing, but something that will be unaffected by the things you are changing. For this investigation, construct one control rocket that has almost no nose cone at all. Just tape the end of the paper tube closed.

D. Students will launch each rocket one at a time and record the distance it traveled (in centimeters) on the (B) Data Log.

E. Students may wish to write in any observations they want to remember as they perform their investigations (things such as direction for example).

F. Students should do five trials of the investigation and record the results on their (B) Data Log.

G. Students will then graph their data on the (C) Data Analysis Sheet in order to draw a conclusion as to which nose cone length produced the best rocket.

STEP 3: EXPLAIN (~10 minutes)

Drawing conclusions from data and evidence

A. Students will write a conclusion for their results. The conclusion should discuss the nose cone lengths used and what they saw happen in their investigation. You may even push the students a little further by asking them to explain why this is the result. What is the reason that a longer cone will have a longer or shorter distance?

STEP 4: ELABORATE (~10 minutes)

Consider other possible variables

A. Give students the opportunity to evaluate other possible variables that could affect the flight pattern of a rocket. They may come up with examples such as: angle of launch, # of fins, length of the tube, weighted with paper clips, etc. This exercise helps to build your students to participation in a full inquiry model. If time permits, give them the opportunity to explore some of these different variables and report results out to the class.

STEP 5: EVALUATE (~20 minutes)

Reflect on findings from rocket testing

A. Ask students to complete the (D) Soda Straw Rocket Analysis Worksheets so that they can draw conclusions based on evidence from their tests.
6.0 Extensions

In Step 4: Elaborate, investigate the purpose of nose cones (they hold the payload of rockets) and some of the changes that have to be made to accommodate launching larger payloads into space (e.g., larger rockets, strap-on boosters to add more thrust, etc.).

7.0 Evaluation/Assessment

In the Teacher Guide, use the (E) “Soda Straw Rocket” Rubric as a formative assessment that aligns with the NRC Framework, National Science Education Standards, and the Instructional objective(s) and learning outcomes in this lesson.
